unwinding  
machine**

Winding-unwinding machine to apply EVA and PUR hot melt adhesive continuously on PVC and textiles.  
Thanks to its modular design, it can be adapted to each customer's specific needs.

Focke Meler has created the winding-unwinding machine for the continuous application of adhesives on PVC substrates and textiles. Thanks to its modular design, this high-performance unit adapts to each customer's specific needs.

## FEATURES

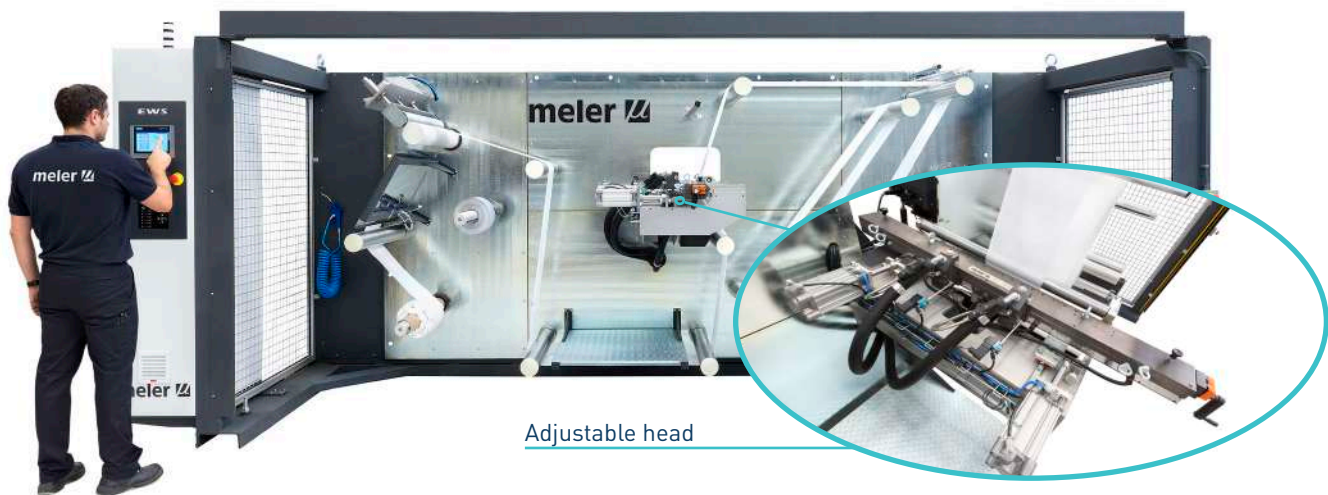

- The coating head can be adjusted to different application widths and a variety of substrates. Provides an even, continuous and reliable application.
- It has lack of material and full drum detection sensors.
- The structure is designed to facilitate access to all machine areas.
- A loading cell controls the correct material tension at all times to obtain even application and perfect rewinding.
- The PLC controls adhesive application.
- The machine is compatible with hot melt adhesives (EVA-based hot melt and PUR adhesives).

## ADVANTAGES

- The adhesive can be supplied by a variety of external dosing devices. These are capable of providing high flows of adhesive, also ensuring the right grammage across the entire application width.
- Automatic recoil if the application stops, to ensure that 100% of the adhesive remains on the substrate.
- Equipped with a head-to-substrate approximation system that prevents damage during production stops.
- Its design enables single drum-threading.
- Equipped with an automatic head cleaning system.
- Manual drum loading and unloading is fast and easy.

## CONTROL PANEL

- The touch screen is used to control all operating modes by means of an intuitive, user-friendly menu.
- It has the following available operating modes: automatic, manual, cleaning-operation and drum threading.

Adjustable head
